

Technological Milestones and Sustainable Solutions: apt Group Sets New Standards at ALUMINIUM 2024

For the first time, the apt Group will present its complete product portfolio at ALUMINIUM 2024. The focus is on sustainable innovations and technical developments that enable apt customers to enhance their competitiveness through, high-quality end products.

Monheim, September 4, 2024 – At this year's ALUMINIUM 2024 (October 08 to 10, 2024, Messe Düsseldorf, Germany), the apt Group will showcase its complete product portfolio to an international audience for the first time. At its 160-square-meter-booth (Hall 4, Booth 4F39), the company will present its latest innovations, emphasizing forward-looking technologies that will impact the aluminum industry. The apt Group will be accompanied by the Alu Menziken Group, which will participate as a co-exhibitor with a separate booth. This participation is a result of the upcoming acquisition of the Alu Menziken Group by the Mengtai Group, the parent company of the apt Group.

Growth Through Innovation and Cooperation

The acquisition of the Alu Menziken Group by the Mengtai Group, expected to be completed in the coming weeks, opens up new opportunities for growth and technological advancements. By combining complementary market approaches and strengths, the apt Group anticipates significant synergies that will enable the development of innovative solutions to address the challenges facing the aluminum industry.

At ALUMINIUM 2024, the apt Group will primarily focus on exchanging ideas with industry experts to identify new business opportunities and discuss current trends and developments. *"We look forward to sharing our visions and innovations with the industry and shaping the future of the aluminum sector together. The trade fair offers a unique opportunity to exchange ideas on technological advancements and actively contribute to shaping the industry's future,"* says Michael Zint, CEO of the apt Group.

Focus on Sustainability and Technological Innovations

For the apt Group, sustainability and environmental compatibility of production, digitization, and automation of manufacturing processes, as well as global competitiveness, are key themes. Given rising raw material prices, stricter environmental regulations, and complex economic conditions, the company believes it is essential to turn these challenges into opportunities.

In terms of innovation, apt will showcase the patented LiteFlap[®], an ultra-light bus flap, and other lightweight components for e-mobility. These technologies offer significant advantages for the automotive and transport sectors, one of apt Group's core markets. Another highlight is the multi-part, patent-pending CoolFusion heatsink solution, developed by apt to meet the increased demands in power electronics. These modular high-performance heatsinks offer high thermal conductivity with reduced material usage and are 100% recyclable.

Trade Fair as a Platform for New Partnerships

In addition to showcasing innovative technologies, the apt Group aims to strengthen existing business relationships and establish new partnerships at ALUMINIUM 2024. They plan to explore potential collaborations and supplier relationships. That said, apt views the trade fair as an ideal platform to expand its market position and actively shape the future of the aluminum industry.

Key data

Location: Messe Düsseldorf, Germany

Date: October 08 to 10, 2024

Booth: Hall 4 Booth number 4F39

##

About apt:

The apt Group is one of the leading companies in the European aluminum industry. It produces, processes, and sells aluminum profiles and products for the construction, transport, automotive, and industrial sectors. The group is active at four production sites in Germany, the Netherlands, and the Czech Republic.

PRESS RELEASE

apt covers the entire aluminum processing value chain - from development, recycling, extrusion, mechanical processing, and surface finishing (anodizing and powder coating) to assembly and logistics. With around 1,000 employees, the apt Group generates an annual turnover of approximately 300 million euros.
